Question 1

Correct

Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```

void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}

```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.**Input:**

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```

1  #include<stdio.h>
2  void function(int n)
3  {
4      int c= 0;
5      c++;
6      for(int i=n/2; i<n; i++){
7          c++;
8          for(int j=1; j<n; j = 2 * j){
9              c++;
10             for(int k=1; k<n; k = k * 2){
11                 c++;
12                 c++;
13             }
14             c++;
15         }
16         c++;
17     }
18     c++;
19     printf("%d",c);
20 }
21 int main(){
22     int n;
23     scanf("%d",&n);
24     function(n);
25 }

```

	Input	Expected	Got	
✓	4	30	30	✓
✓	10	212	212	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
